INDUSTRY SNAPSHOT: SECTORS Supports Ohio's Bioscience Industry

Summary from BioOhio

"Ohio has a rich manufacturing history built around steel, the automotive industry, aeronautics, rubber and plastics, and tool and die, and as a supplier of household appliances and consumer goods. However, Ohio's manufacturing economy is in transition, moving to one which embraces high-technology industries. This is most apparent within the combined bioscience and healthcare industries which are growing rapidly and represent 15.7 percent of the state's economic output, contributing \$148 billion annually and accounting for 1.37 million direct and indirect jobs (BioOhio, Ohio Bioscience Growth Report, 2007-2008). At least 1,141 bioscience-related entities (companies and research institutions) are located in Ohio, which represents a four-fold increase from the 352 bioscience entities present in 2001.

"Medical device and equipment companies are the prevalent segment of Ohio's bioscience industry (639 organizations—found below), with nearly 50 percent of the entities participating in the development, manufacture, and distribution of medical devices including cardiovascular stents, replacement orthopedic joints, and advanced imaging tools. Ohio's strength in medical devices and equipment is a natural outgrowth of the state's advanced manufacturing expertise coupled with extensive bioscience research activity. Northeast Ohio prevails in medical device and equipment, whereas southwest Ohio leads the state in pharmaceutical economic impact.

"Eleven Ohio pharmaceutical manufacturing operations have either expanded or announced new facilities in the past few years. Ben Venue Laboratories (Bedford, Ohio) and Roxane Laboratories (Columbus, Ohio)—both divisions of Boehringer Ingelheim—have recently expanded. These long-time Ohio companies are joined by San Diego-based Amylin Pharmaceuticals. Amylin recently built a \$470 million facility near Cincinnati to produce a long-acting-release version of Byetta for the treatment of type 2 diabetes. Amylin was drawn to the Cincinnati area in part because of the nearby facility of its Ohio partner, Alkermes.

"As a result of this expansion, Ohio's pharmaceutical, medical device, and diagnostic manufacturing operations will add 700 new jobs in the next few years, and look to Ohio's community colleges as a source of entry level workforce and workforce training solutions. The proposed SECTORS Act provides a framework which supports the implementation of educational programs, workforce training and infrastructure for the statewide expansion of Ohio's bioscience industry, not limiting investment to just one region. All new programs would be implemented to meet accepted industry standards (pre-agreed certification standards) across the state, with buy-in from employers prior to launch. This would facilitate rapid workforce deployment and transfer to meet local needs associated with current company expansions or new company arrivals.

"Ohio already has a strong community college educational framework that supports the bioscience industry. Notable examples include:

- 1. Cuyahoga Community College's (Cleveland) newly implemented non-degree biomanufacturing programs, offering 6 to 16 week training in pharmaceutical and medical device manufacture. Local employers, such as Ben Venue, a division of Boehringer Ingelheim, were instrumental in shaping course content. Ben Venue currently has 40 manufacturing openings, and looks to hire between 200 to 250 more employees upon completion of a pending FDA review.
- 2. Lakeland Community College (Cleveland) was the first college in Ohio to implement a 2-year degree structured for bioscience/biotech research technicians. Northeast Ohio employers such

- as Ricerca, Steris, Ben Venue, The Cleveland Clinic and others have greatly benefited from this program.
- 3. Sinclair Community College (Dayton) and The University of Cincinnati Raymond Walters College, have 2-year bioscience/biotech degree programs similar to Lakeland, again structured to meet regional needs.
- 4. With a strong bio-pharmaceutical presence in Southwest Ohio, BioOhio has established the "Southwest Ohio Biomanufacturing Educational Consortium," which looks to establish 2-year degree programs at Sinclair and Raymond Walters focused on graduating manufacturing technicians, and leverages Sinclair's strong manufacturing engineering program. Regional employers such as Amylin and Alkermes are key consortium partners and look to graduates of this degree program to fill future workforce needs.

"A full listing of bioscience industry specific 2-year degree and certificate programs offered by Ohio community colleges is shown below:

Bioscience/Biotech Research Technician Associates Degree

Lakeland CC Stark State North Central State Sinclair CC UC Raymond Walters Hocking College Cincinnati State

Certificate Programs

Cuyahoga CC UC Raymond Walters Lakeland CC

"BioOhio is currently working with Columbus State Community College to design and implement appropriate degree and training programs to meet the needs of central Ohio companies, such as Roxane, PharmaForce, Battelle, Abbott Nutrition and others, who all have pressing needs for trained entry level workforce. BioOhio is also in discussions with Toledo Regional Growth Partnership and Northwest Ohio educators."
